How much variation comes with each comparison?
Descriptive SD, n=3 each; groups overlap at seed 42 / run 1, so this is not a variance decomposition
Activation drift |PC1|
Fixed-seed SD ≤ 2.1e-06
Standard deviation (score units)
Harmful training data (%)
Across seeds 42, 123, 789
Across three runs at seed 42
Claude answer quality ↑
Standard deviation (score units)
Harmful training data (%)
Checkpoint 3 misalignment ↓
Standard deviation (percentage points)
Harmful training data (%)
